### title

How You Can Get Control of Operational Reporting in SumTotal Learn

### meta-description

Even if you haven't mastered every aspect of SumTotal Advanced Reporting just yet, you can be more productive in a short time.

### keywords

SumTotal Advanced Reporting,data governance in SumTotal Learn,mastering SumTotal Advanced Reporting

### body

SumTotal Advanced Reporting provides basic reports to help you get started, but many users tell us reporting is the most frustrating feature in their LMS.

There is a reason for the disconnect. SumTotal Advanced Reporting is a tool for administrators and reports analysts to create the reports your business users need. While your "citizen data scientists" can use it well, most business users do not have the skills.

- Administrators and reports analysts must have skills in database structures, tables, joins, and other features of reports development before they can build the necessary Custom Domains, Topics, and Ad Hoc Views.
- Your organization needs a data governance team with standards and procedures in place for managing and sharing data.
- Most important, your team must have the vision, the skills, and the relationships to know what data end-users at every level of the organization need and how they use it.

Developing a robust reporting structure won't happen overnight, but you can get a start right now. Even if you haven't mastered every aspect of reports just yet, you can be more productive in a short time. You will see results when you:

- create a training plan for your team,
- institute data management and governance procedures,
- encourage conversations about learning and performance that will uncover the information needs of users at every level of the business, and
- understand how visualizations can drive better decision-making.
